

Who's Who?

GPU

I am powerful in showing things on the computer screen, but I have a bad memory and I need the help of ROM and RAM.

CPU

I am the processor. I am very smart and fast at calculating things. I am super busy bossing around and telling the other components what to do.

HARD DRIVE

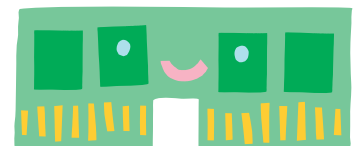

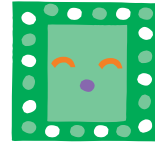

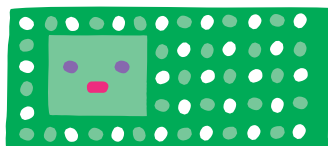

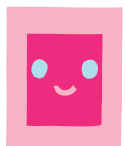

I am slow, but I keep good care of your pictures and games.

ROM

I remember all the important things and stuff that you don't want to accidentally remove or have disappear when the power is turned off.

RAM

I remember all immediate things and run between the CPU and the Hard Drive but I forget everything once the computer is shut down.
